Grid References		The National Grid	
- A map is criss-crossed with horizontal and vertical lines that create a grid. - The grid and squares help to narrow a search area so you can locate features on a map. - Usually, the lines are numbered with two digits. Eastings are the numbers that run from west to east. Northings are the numbers that run from south to north. - The easting and northing numbers are put together to create a four-digit grid reference, e.g. (32,43), which refers to the bottom left corner of a square on the map. Grid references can be even more specific by adding an extra digit to both the easting and northing numbers. - These six-digit grid references, e.g. (323,432), tell us more precisely whereabouts in the square something is.		- The National Grid is a grid reference system for the whole of Great Britain. - It splits Great Britain into squares - each is 100km. - The spaces can be identified by using two letters e.g. SK Easting and northing numbers can be used to split the squares into smaller sections making them easier to use.
